ClinoVoice

INFORMATION FOR PATIENTS

Helping your clinician focus on you

AI note-taking during your appointment

What happens during my appointment?

ClinoVoice records your consultation conversation and uses artificial intelligence (AI) to draft notes and letters about your care. Your clinician will tell you before using it.

Your clinician checks everything

AI can make mistakes. Your clinician reviews all draft notes and letters and corrects them before use. Decisions about your care remain with you and your clinical team.

You can say no

Tell your nurse or clinician if you prefer ClinoVoice not to be used. You can ask for it to stop at any time. Your clinician can take notes another way.

Questions about your information?

Ask the clinic for its privacy notice: how your information is used and how long it is kept. Please ask a nurse if you need help or another format.
